(54) TELEPHONE SYSTEM FOR MOBILE BODY

(57) Abstract:

PROBLEM TO BE SOLVED: To protect privacy of a possessor in the case of voice output of a memory dial registered in a portable telephone set in the hand-free telephone system for a mobile body.

SOLUTION: With a portable telephone set 100 set to a cradle 200, a microcomputer 22 in the cradle reads a memory number and its telephone number stored in advance in the portable telephone set 100. The user uses a microphone 36 to enter a name of a dial destination to each memory number and stores it to a recording and reproducing circuit 26. When the user operates an operation switch 38 to select any of memory numbers, the microcomputer 22 reads aloud the memory number, the registered call destination (name) and the telephone number in voice, and in the case that the telephone number read from the portable telephone set 100 and the telephone number at registration of the name does not match with each other, reading aloud of the destination (name) in voice is inhibited. Thus, even when the portable telephone set 100 of other party is set on the cradle, its call destination is not

CLAIMS

[Claim(s)]

[Claim 1] It is the telephone system for mobiles characterized by to be the telephone system for mobiles equipped with an installation means lay a portable telephone, and for said installation means to have the control means which reading raising of the call-origination point in said voice reading raising means permits only when a voice reading raising means read out the call-origination point data containing the call-origination point and the telephone number with voice, and the call-origination point data which fulfill predetermined conditions among said call-origination point data are chosen.

[Claim 2] It is the telephone system according to claim 1 for mobiles which said installation means is equipped with a registration means register said call-origination point, and an acquisition means acquire the call-origination point data memorized by said portable telephone, and is characterized by for said control means to permit reading raising of said call-origination point only when the call-origination point data which have the telephone number which is in agreement with the telephone number at the time of call-origination point registration among said acquired call-origination point data are chosen.
